CS graduate specializing in AI engineering, with hands-on experience building multi-agent LLM pipelines, RAG systems, and full-stack AI applications using FastAPI, LangGraph, Ollama, and Groq. Delivered real-world system including an AI medical scribe, a confidence-scored customer support agent, and a multi-agent content moderation platform. Passionate about turning cutting-edge LLM research into production-ready applications.

PROFESSIONAL EXPERIENCE

Tech support Specialist, Amazon — Mar 2026 - Aug 2026

- Resolved complex customer grievances and technical issues, consistently achieving a 95%+ Customer Satisfaction rating and meeting strict timelines.
- Provided proactive tech support by guiding users through self-service knowledge bases, significantly reducing repetitive ticket volume.
- Collaborated with team leads and QA specialists to streamline communication protocols and improve First-Contact Resolution (FCR) rates by 12%.
- Utilized internal CRM systems, ticketing tools, and diagnostic workflows to isolate, document, and escalate platform bugs to backend engineering teams.

AI Engineer, Orzeh Technologies — Jul 2025 - Feb 2026

- Built Python agents, content moderation, conversation summarization (map-reduce), proactive risk detection, and a RAG-based Q&A chatbot, integrated with a locally hosted LLM (Ollama).
- Implemented RAG using sentence-transformers for semantic embeddings and cosine similarity search, enabling contextual Q&A over Mattermost conversations with message-level citations.
- Built a multi-phase system combining regex pattern matching (PII detection, leetspeak normalization), VADER sentiment analysis, and LLM verification to detect policy violations, data leaks, and behavioral risks.
- Developed an async FastAPI backend with JWT auth, role-based access, and auto-scheduling, with a React frontend featuring agent monitoring, Chart.js visualizations, and PDF export.

Software Engineering Intern, Evaxone (onsite) — Apr 2024 - Jun 2024

- Processed and validated hundreds of dataset entries, ensuring accuracy, consistency, and integrity of project data.
- Identified and resolved technical problems in project workflows; documented fixes and recommended process improvements.
- A ssisted in QA testing and regression checks, verifying functionality across 5+ application modules to maintain consistent performance.

PERSONAL PROJECTS

Bitcoin Price Prediction using Hybrid machine Learning (Final Year Project)

- GatheredBitcoin price, commodities, and news data, handled missing values, scaled features, and engineered new ones for better insights.
- Implemented LSTM, ARIMA, and XGBoost models, tuned hyperparameters, and assessed performance using key metrics like MAE and RMSE.
- Built options to Choose the best-performing model, individual models, Average of all models, and prepared the system for real-world implementation.

Chartli - AIMedicalScribe(Full-StackProject)

- Built an AI-powered medical scribe that converts typed notes, dictated audio, or doctor-patient conversations into structured SOAP notes using Llama 3.3 70B via Groq and Whisper Large v3 Turbo for transcription.
- Built an AI-powered medical scribe that converts typed notes, dictated audio, or doctor-patient conversations into structured SOAP notes using Llama 3.3 70B via Groq and Whisper Large v3 Turbo for transcription.
- Built a REST API with FastAPI and SQLAlchemy, a React/Vite frontend, PIN-based access control, and achieved 89% test coverage across the backend.

Resolva - AI Customer Support Agent (LangGraph + RAG)

- Built a confidence-scored AI support agent that resolves customer queries from an uploaded knowledge base and automatically escalates low-confidence responses to human agents via email using Resend.
- Implemented a full RAG pipeline with ChromaDB vector store and sentence-transformers embeddings, integrated with a LangGraph agent graph and Groq-hosted LLaMA 3.1 70B for answer generation.
- Developed a FastAPI REST backend with ticket management, analytics, and KB upload endpoints, paired with a React + Vite frontend for chat, ticket tracking, and usage statistics.

EDUCATION

BS, Computer Science **202 1 – 2025**
Government College University, Lahore, Pakistan

TECHNICAL SKILLS

Languages	Python, C/C++, SQL
AI/ML	RAG, Ollama, Sentence-Transformers, LLM Prompt Engineering
ML Frameworks	TensorFlow, PyTorch, Scikit-learn, Keras
Data	Pandas, NumPy, Matplotlib, Seaborn, Power BI
Backend/Tools	FastAPI, Django, Docker, Jupyter Notebook

CERTIFICATIONS

Data Analytics and Visualization **- Accenture**

Data Science job Simulation – **BCG X**
